iBOLT™ Special Edition
Extending the Capabilities of SAP® Business All-in-One

The Key to Business Process Automation Across Your Enterprise

iBOLT Special Edition (SE) for SAP Business All-in-One is based on Magic Software's award-winning iBOLT process integration solution, which enables enterprises to quickly create and dynamically deploy integrated business processes around SAP Business All-in-One. iBOLT SE facilitates the sharing of data among applications, empowering enterprises to create new workflows and integration processes, such as website integration, business process monitoring, master data synchronization, and many more.

Key Benefits

- Accelerates time-to-deployment by eliminating the need for lengthy business integration programming projects around SAP Business All-in-One
- Flexibly adapts to support wide range of usage scenarios [see typical examples below]
- Reduces total cost of ownership (TCO) and enhances return on investment (ROI) by automating business processes, minimizing IT resources and facilitating ongoing maintenance
- Minimizes project risk by providing a standard, certified and tested solution, proven in hundreds of successful implementations
- Enables enterprises to quickly adapt to evolving business needs, reducing maintenance costs
- Integrates seamlessly with SAP All-in-One via an xAPPs powered by NetWeaver certified adapter
- Maximizes usability by retaining the familiar user interface of your key applications
- Enables a service oriented architecture (SOA)

Typical Usage Scenarios

- Website integration
- Workflow
- Business process monitoring
- Inter-company trade
- Master data synchronization
- EDI
- Share data across systems

The Value of Business Process Automation Across Your Enterprise

Tailored specifically for SAP Business All-in-One, iBOLT SE is a future-proof solution that extends the capabilities of SAP Business All-in-One to increase productivity, facilitate efficient flow and analysis of critical information, and ultimately deliver more value to customers.

With iBOLT SE, enterprises can integrate existing IT systems with SAP Business All-in-One in a rapid and cost-effective manner. By separating the definition of business processes and workflows from the underlying infrastructure, iBOLT SE simplifies the integration process and provides the flexibility to address evolving business needs.

iBOLT SE captures SAP Business All-in-One events, such as Sales Order creation, and allows business users to create new workflows incorporating these events. An intuitive, wizard-based interface drives the workflow creation process, enabling rapid implementation of changes without requiring costly customized programming.

Delivering Value Through Simplicity

Innovative visual design tools, a data mapper, and easy-to-use integration wizards provide the flexibility and scalability that is required by today's customer-centric and web-enabled business environment. With full support for a diversity of platforms, iBOLT SE ensures full integration across an array of environments. With iBOLT SE there is no need to write code; rather, users configure pre-written functions and services using wizards and "drag & drop" configuration tools to define data structures and business logic.

iBOLT™ Special Edition Extending the Capabilities of SAP® Business All-in-One

INTEGRATE.

Unique, Business-Driven Technology

iBOLT SE enables enterprises to manage their business processes with maximum flexibility using a service oriented architecture (SOA). Enterprises can create, change and extend services in accordance with business needs, without worrying about the implications of these changes on the underlying platform, database or applications. Generic services can be easily created and reused to support multiple business processes. As a result, iBOLT empowers enterprises with the agility to respond quickly to business changes, while generating huge savings in application integration projects.

The Solution to Address Your Business Needs

Combining SAP Business All-in-One with iBOLT SE enables enterprises to deploy a wide range of business solutions in a fully automated and integrated systems environment. Providing an end-to-end business integration solution, iBOLT SE enables SAP users to meet their varied business needs in numerous usage scenarios. A few samples are highlighted below.

Website Integration

iBOLT SE maximizes the value of existing e-commerce sites by integrating them with SAP Business All-in-One. This solution streamlines the data flow between the two applications, enabling real-time, coordinated data handling particularly in the areas of inventory management, customer credit management and on-the-spot order confirmation. **A single point of data entry** eliminates the need for time-consuming and error-prone retyping of data in separate systems, thus reducing the risk associated with today's manual processes.

Workflow

iBOLT SE enables the extension of SAP Business All-in-One business workflows by allowing SAP Business All-in-One users to interact with non SAP Business All-in-One users within the enterprise, as well as with external business partners. A complete workflow cycle inside and outside the enterprise (as needed) can be created and managed using various communication means, e.g., SAP Business All-in-One, web browsers, hand-held devices, emails and other 3rd party applications.

Business Process Monitoring

iBOLT SE allows business users to monitor business processes across enterprise systems. Using the dedicated Business Activity Monitor (BAM) users can easily trace, manage and monitor any number of processes. Out-of-the-box adaptors enable business process monitoring to be extended beyond the enterprise's internal systems, furnishing a wider view of the processes from start to end.

“Magic’s comprehensive coverage makes it a good fit for midsize companies looking for an all-in-one solution for their integration, BPM, and service-oriented architecture (SOA) needs.”

*The Forrester Wave™
Integration-Centric Business Process
Management Suites,
Q4 2006 (December 2006)*

“A proven technology, growing customer adoption, focus on midsize enterprises, a strengthening relationship with SAP, and a large network of focused partners are key strengths for the company”

*Massimo Pezzini,
Gartner (May 14, 2006)*

About Magic Software Enterprises

Magic Software Enterprises (NASDAQ: MGIC) has been a leader in enterprise application development, deployment and integration technology and solutions for more than two decades.

The company's service-oriented platform is used by companies worldwide to develop, maintain, and deploy both legacy and new business solutions, while integrating these applications across both internal and external, heterogeneous environments. Magic Software's platform-independent methodology lets companies achieve agility by quickly assembling composite applications, allowing programmers to create services and architects, and business analysts to orchestrate and reuse these services to enable business processes. Through partnerships with industry leaders such as IBM, SAP, Oracle, Salesforce.com, and more than 2500 ISVs worldwide, Magic Software technology is used by more than 1.5 million customers around the globe.

Strategic Partnership with SAP

Through its strategic partnership with SAP, Magic Software delivers iBOLT Special Edition (SE) to extend the capabilities of SAP® Business All-in-One business management solution for midsize enterprises.

Magic Software's community of SAP partners is growing. More than 200 SAP partners around the world include iBOLT SE as an active part of their toolboxes.

Magic Software has received SAP's Award for Innovation (2005) and Quality (2006).
